INNOMATHS 2025

MATHEMATICS INNOVATION COMPETITION

IoT Math Speed Challenge

INTRODUCTION

Many JMC students may find mathematics difficult and less exciting. This project brings fun into learning by combining math with technology. Using ESP32, I2C LCD, keypad, and buzzer, players can test their math skills in a fast and interactive way.

OBJECTIVE

- To create an IoT-based game that improves math speed and accuracy.
- To make learning math interactive and enjoyable.
- To record and track players' scores for motivation and improvement.

PROBLEM STATEMENT

Students often lose interest in practicing math because traditional methods feel boring. There is a need for a fun and engaging platform that encourages learning through play.

IMPACT AND STRENGTH

- Makes math fun and competitive
- Encourages faster problem-solving skills
- Boosts confidence in mathematics
- Easy to play and user-friendly design
- Can be used by students, teachers, or even in competitions

INNOVATION

- Easy-to-use system with keypad & LCD.
- Works in classrooms, competitions, or self-study.
- Motivates students while teaching problem-solving skills.

COMMERCIAL

- Can be scaled for schools & tuition centers.
- Low-cost educational tool.
- Suitable for math contests & workshops.

CONCLUSION

The IoT Math Speed Challenge is not just a game, but also a learning tool. It motivates students to practice math in an exciting way while using modern technology. Play, compete, and become the fastest math solver!
